# All assets will eventually sit on distributed ledgers

2% tokenization rate by 2030

At this magnitude, the market drives **recentralization of custody over specialized, large-scale custodian banks vs. self-custody**

# A two-sided market

## The **sell-side**

### safeguards and services the assets

A limited number of **specialized, large-scale digital asset custodians** service custody and other capabilities to the demand-side of the market.

## The **sell-side** needs

### security, scalability, compliance

- ✓ The highest degree of protection for the cryptographic key material
- ✓ A powerful governance framework to execute at scale with no single point of trust
- ✓ A compliant connectivity into blockchain ecosystems, CeFi and DeFi
- ✓ A future-proof technology stack built for integration into financial networks

## The **buy-side**

### owns the assets, but externalizes control

The rest of the market externalizes the control over digital assets to **multiple specialized, trusted custodians** and asset servicers, consuming custody-as-a-service.

## The **buy-side** needs

### connectivity, diversification, orchestration

- ✓ A single entry-point to a global and compliant multi-custodial network
- ✓ A seamless framework to manage the lifecycle of any digital asset class
- ✓ A diversified risk strategy around asset allocation and technical threats
- ✓ A settlement layer for multi-lateral exchange of value, collateral management

# The largest Tier 1 banks and custodians invest

The largest Tier 1 custodians invest in the infrastructure to safeguard the market, triggering a virtuous cycle of adoption. This shift creates new regulatory standards, banks setting up the gold-standard of compliance practices.

# The market is shifting

Towards security, compliance and tighter regulatory requirements

WAVE 1: 2010 – 2020

## Market creators

Small, fast-growth crypto-native scaleups with simple use-cases

Custody with 'good enough' security

Free pass on regulatory oversight

**\$3+ tn**

Peak market capitalization of cryptocurrencies, stablecoins, DeFi

WAVE 2: 2020 – 2030

## Market definers

Top Tier regulated institutions investing in infrastructure for complex use-cases

Maximum possible security & compliance

Clearer and tighter regulatory requirements

**\$20++ tn**

Potential asset value to be tokenized near-term\*

WAVE 3: 2030 – 2035

## Following majority

Mid-market banks, intermediaries & corporates, broad adoption

No trade-offs b/n security and agility

Global, interoperable regulatory standards

**\$350 tn–\$1,000 tn**

Capital markets moving on-chain for all asset classes, stable-coins widely adopted.

# The custodian's dilemma

# Custodians are faced with binary choices...

...especially as use cases evolve and demand-driven expansion occurs

# Wallet Services & Custody are foundational

For unlocking all other market opportunities

# The strategic imperative in the Web3 world

## Industrial and Digital Banking Age (1980s – 2020s)

Banks executing vertically integrated, universal business models

## The Web 3 World (2020s onwards)

Banks to double-down on core strengths and their source of competitive advantage

# Our learnings from a bank's typical journey

# Things can get complicated, quickly

# METACO | Harmonize

The global standard for institutional digital asset custody and orchestration.

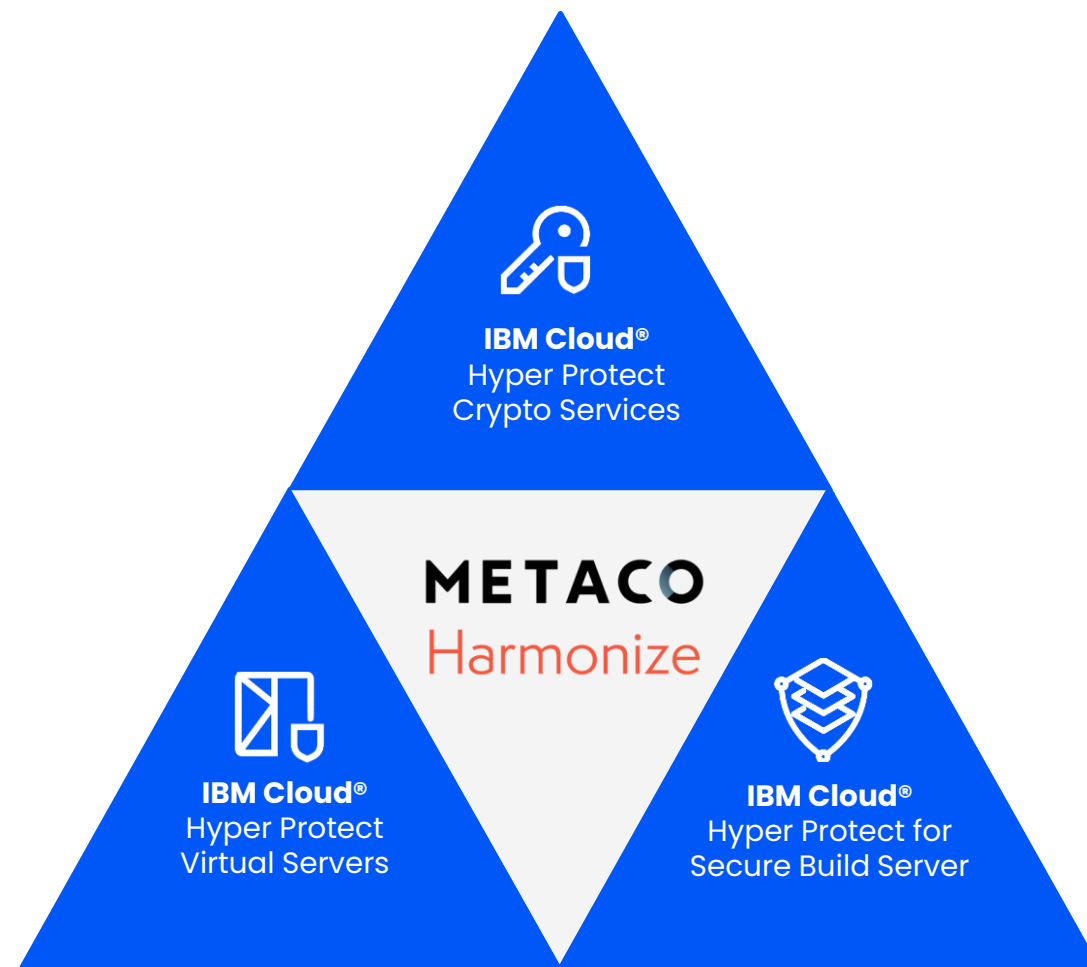

Market-leading platform trusted by global Tier 1 banks, custodians, and exchanges.

# METACO and IBM

We help custodians go to market fast, in a safe and compliant way

-  Scale to millions of wallets
-  No hardware to manage
-  Migrate existing keys off-chain

# Citi selects METACO for Digital Asset Custody

## Citi Securities Services:

Serving **104 countries** through a regional service hub construct

Industry-leading custody network with **63 proprietary markets**

**US\$27 trillion of assets** under custody, administration and trust

*"We selected METACO Harmonize after a rigorous process, being impressed by the platform's bank-grade security architecture, its asset-agnostic compliance frameworks, and its unique capabilities for deployment and integration, which match our global technological, operating and servicing model."*
